DETAILED ACTION

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed, a method.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 6 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsushita (US 6,759,703).

Matsushita discloses the claimed method of manufacturing a semiconductor device (figure 3) comprising: the step of forming a capacitor electrode 30 on a semiconductor substrate 12; the step of forming an insulating film 14c which has an upper surface on said capacitor electrode; the step of forming a trench 32 in said insulating film so as to expose part of said capacitor electrode; the step of forming a conductive material film 31 which fills in the inside of said trench and which extends to the upper surface of said insulating film; the step of forming a wiring layer 31 which includes said conductive material film which fills in the inside of said trench and which has the upper surface located on a approximately the same plane as the upper

surface of said insulating film by electroplating using barrier layer as the seed layer and excess portion of copper being removed by CMP.

Regarding claim 10, said conductive material film 31 includes copper.

Allowable Subject Matter

Claims 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: prior art references do not teach or render obvious the method of making a semiconductor device comprising the step of forming a conductive material film including forming a conductive material film which becomes another wiring layer so as to fill in the inside of the contact hole and the other trench.
